Case Report

Report of a patient with leukemia who improved after taking citric acid orally

Alberto Halabe Bucay

Accepted 02 December, 2013

The fact that citric acid is effective as a cancer treatment is already published, in this article I present the case report of a patient with a myeloid leukemia M2 who improved after taking citric acid orally.

Keywords: Leukemia, citric acid

TEXT

I published the medical hypothesis that citric acid, as being the natural inhibitor of glycolysis, would be effective as a cancer treatment since March, 2007 in Medical Hypotheses, from Elsevier (Bucay, 2007). Two years and two months later, on May, 2009, I published in the same journal the first case of a patient with cancer who improves only with citric acid as antineoplastic treatment, the patient is a 14 years old boy who had terminal cancer, medullary thyroid cancer as part of a multiple endocrine neoplasia type 2B (Bucay, 2009), and 9 months later, on February, 2011, the second patient with terminal cancer, peritoneal mesothelioma who improves again, only with citric acid, was published (Bucay, 2011).

In this article I present the case of a 75 years old male patient with myeloid leukemia type M2 confirmed by a bone marrow biopsy, his blood count on May 2nd, 2013 presented Hemoglobin 10.2 g/dl, leukocytes 960 per mm³, with 67.7% lymphocytes and 28% neutrophils and 72,000 platelets per mm³; he began taking citric acid orally, 10 grams each day, and the results of his blood

count from September 3d, 2013 were; Hemoglobin 9.1 g/dl, leukocytes 2000 per mm³ with 64% lymphocytes and 33% neutrophils and his platelets presented an increase of 165,600 per mm³. The patient only received citric acid as his medical treatment.

On November 10th, 2013, the patient is still in perfect general conditions, and his platelet account was 188,000 per mm³, only taking citric acid orally, 10 grams each day.

The hypothesis that citric acid is effective as a cancer treatment has been demonstrated with these 3 unquestionable cases (Bucay, 2009, Bucay, 2011), including this case report.

AKNOWLEDGMENTS

To Dr. Jose Ruano Aguilar, from Hospital Angeles Lomas for his support.
